Year 6 letter

Dear Parents,

This week in Maths, Year 6 have constructed and interpreted line graphs, calculated and interpreted the mean of a set of data, solved multi-step problems and practised long division. English work included reading comprehension, finding out about idiomatic language and writing a detailed diary entry to show empathy with a character. We have finally got to the end of The London Eye Mystery - the mystery has been solved! Other work this week has included finding out about the crucifixion of Jesus in RE and learning about the effects of smoking cigarettes in science.

Teacher of the Week

This week's teacher was Riley and he decided to teach a PE lesson (much to Mr Deakin's delight!) He organised a dodge ball tournament, clearly explained the rules, refereed the matches and gave out prizes. Everybody had a brilliant time.

Home Learning

This week's home learning reinforces our maths work on division. The children need to decide whether to use long or short division for each problem and they must interpret remainders appropriately. When doing long division, the children write out multiples first - it is fine for them to use a calculator to help with this step only.

Best wishes,

Louise Grinstead
