

## Keeping Children Safer Online

Technology and the internet, whether accessed by computers, mobile phones or other devices, are becoming firmly embedded within today's family life. The internet offers many exciting benefits and opportunities whether using it to send emails, shop or socialise with friends. However for some of us it can seem frightening and a lack of confidence or knowledge can make adults feel wary about keeping children safe online. There are practical steps we can all take to help keep children and young people safe when using technology.

### Follow the Golden Rules

#### Ground Rules

- Discuss as a family the internet will be used in your house. Consider what will be kept private online (information, credit card details, photos etc) and decide rules for meeting online friends (such as taking someone with them, meeting in a public place etc). Know what your child is doing online much like you would offline.
- Discuss using strong passwords with your child so they understand how they can protect their online accounts. It's important they know they need to keep their passwords safe and not share them with anyone or use the same password for several accounts. If your child's account is "hacked" or compromised then make sure they change their password and report any concerns or suspicious activity. Check how secure your passwords are here: <http://howsecureismypassword.net/>. For more advice on using strong passwords visit <http://tinyurl.com/Getssafeonlinepassword>

#### Online Safety

- Filter unsuitable sites by using parental control software so that they cannot be seen or used by your children – most ISPs provide free tools and there are free and purchasable programmes you can install.
- Always remember that parental control tools are not always 100% effective and sometimes things can get past them, so don't rely on them alone to protect your child.
- Install antivirus software, firewalls and secure your internet connections e.g. wireless networks. Visit your ISP website or [www.getssafeonline.org](http://www.getssafeonline.org) for more information. Consider how safe you are when you're online – shopping, banking etc. Make sure you are aware of online threats (such as scams etc) and how you can protect yourself.
- Visit [www.saferinternet.org.uk/advice-and-resources/a-parents-guide](http://www.saferinternet.org.uk/advice-and-resources/a-parents-guide) for safety information about consoles and devices and [www.saferinternet.org.uk/advice-and-resources/parents-and-carers/parental-controls](http://www.saferinternet.org.uk/advice-and-resources/parents-and-carers/parental-controls) for parental controls

#### Location

- Where possible, locate computers and laptops in a family area where children's online activity can be monitored or supervised. Always supervise the use of webcams and any applications or devices which allow voice or video chat. Also be aware of the use and location of other devices your child's uses which allow internet access such as mobile phones and games consoles.

#### Dialogue

- Don't panic! Talk to your child and ask them to show you (or even teach you) how they use the internet and the computer, learn which websites or tools they like to use and why. Learning together can often open opportunities to discuss safe practise with your child.
- Always ensure your child knows how to block or report another user who may be sending nasty or inappropriate messages or content. Encourage your child not to retaliate or reply.
- Make sure your child knows to tell an adult they trust if they see something online that makes them feel scared, worried or uncomfortable. If your child receives any abusive messages etc keep them for evidence purposes to show to the school or police. You can also report problems directly to service providers and websites.
- Always report any illegal online activity to the appropriate agency e.g. the Police, CEOP or IWF.
- Make sure your child understands that their online actions can have offline consequences e.g. sending nasty or upsetting messages. Ensure your child knows that once an image or video is sent to someone (friend or stranger), they have lost control and anyone can potentially see it.
- **Remember:** It's essential that you be realistic - banning the internet will not work, it often drives the problem underground and makes a child less likely to report a problem. Also children can use computers etc at friends' houses and at school so education around its safe use is essential. Educate your children as well as yourself and the whole family will benefit from using the internet.
